

HOW TO CHANGE PANEL BATTERY

The panel battery is usually good for 3-5 years. You will get a low battery signal on your keypad letting you know its time to be replaced.

It can be replaced two ways;

- 1) We can send a technician out but the charge is \$75 for the service call and \$35 for the battery.
- 2) You can replace it yourself. We are more than happy to assist you over the phone and advise you what battery to buy and where they are available.

First, you need to locate your Alarm Panel (NOT the keypad).

It is a metal box usually located in an unfinished basement area or in a closet.

Open the metal box

You will see a circuit board and a battery the size of a small brick

Gently wiggle off the 2 connectors from the battery. You will not get shocked!

Take the battery to a Radio Shack or Batteries Plus and they will assist you in buying the correct size.

To install the new battery - connect the red wire to positive and the black wire to negative.

If you feel uncomfortable doing this, then give us a call and we will assist you!

Once the new battery is installed, close the box and you are done.

It can take up to 24 hours for a full charge and for the low battery light to go away.
